EDUCATION

University of Liverpool

October 2020-Sept'22

Masters in advanced computer science with a placement year

Relevant Courses: Advanced Algorithm Techniques, Machine learning, Knowledge representation in AI, Neural Networks, Network security, Deep Learning

Jawaharlal Nehru Technological University, India

September 2013-May 2017

Bachelors in computer science and engineering

CAREER OBJECTIVE

I am a skilled full stack developer with pivotal experience in technologies such as ReactJS, JavaScript, Python, Django and SQL databases with a strong background in both front-end and back-end development, I am committed to delivering robust and high-quality web applications. I am eager to collaborate closely with the team to ensure the deliverables are met.

SKILL SETS

Programming Languages & Web Technologies: Python, JavaScript, HTML, RESTful web services, React, Redux, NextJS,

Machine Learning Libraries: TensorFlow, Scikit-Learn, Keras,

Databases: MySQL, DynamoDB,PostgresSQL

Version Control & Frameworks: GitHub, Django, Django Rest Framework, Flask, FAST API

PROFESSIONAL EXPERIENCE

Deloitte USI, Hyderabad

August 2024- January 2025

I worked as a contract-based individual contributor with Deloitte to help migrate a product from Flask to FastAPI and integrate GraphQL on the backend. On the frontend, I built the UI from scratch using ReactJS and JavaScript. I also collaborated with the deployment team to ensure a secure and optimized release of the product.

Wayfair, USA (Remote)

April 2023- July 2024

As a senior Software engineer under the payroll of Foray Software limited, I am currently working with NextJS, GraphQL and Python's Fast API. In this position, I am responsible for a range of software development and design tasks, with a specific focus on utilizing Next.js and TypeScript for front-end development. Additionally, I am learning GraphQL and FastAPI to handle the backend functionalities of the application.

Trust Payments Ltd, London,UK

May 2022- March 2023

As a Full stack developer, I was part of a team that is transforming the way digital payments work in the UK. In my role, I was responsible for developing software solutions that utilize the latest technology stack such as ReactJS, Redux toolkit including serverless applications using AWS. Collaborating with highly experienced seniors has allowed me to gain valuable insights and knowledge of the best practices in application development, which I apply to my work to ensure that our solutions are high-quality and efficient.

Electrical Cooling Solutions UK

September 2021- March 2022

As a full stack developer at an Engineering consultancy based in Nottingham, I was responsible for developing web-based simulation software from scratch using ReactJS, Redux, Python's Django Rest framework, and AWS lambda functions in python. This involved designing, building, and deploying the software, as well as utilizing MUI and other plugins to enhance the UX design of the application. Through this experience, I gained valuable knowledge and expertise in the development of SAAS applications, and I am committed to leveraging this knowledge in future projects to ensure high-quality and efficient solutions.

Accenture Solutions Pvt Ltd, India

January 2018-March 2020

As an Application Development Analyst at Accenture Solutions Pvt Ltd in India, I had the privilege of working on a diverse range of cutting-edge technologies, including ReactJS, Redux, Material UI, Python's Django Rest Framework, AWS, and PostgreSQL. Among my notable achievements, I successfully spearheaded the development of an internal dashboard that showcased essential metrics to key stakeholders, receiving widespread acclaim from the team.

Hexsor Scientific UK

Software Development Engineer, Part time April 2021-August 2021

As a part-time engineer, I was assigned to work on an exciting project of creating a Realtime dashboard which retrieves data from a backend Rest API and presents it to users with captivating data visualizations. To accomplish this, I harnessed my experience in Python’s Flask framework, Javascript utilizing libraries such as dash and d3, to implement real time dashboard. Additionally, I leveraged my knowledge of machine learning algorithms, including regression and clustering, to perform advanced data analysis on the retrieved data, enhancing the dashboard's insights.

RESEARCH EXPERIENCE

Deep Reinforcement Learning -An overview

In my research, I have analyzed the field of Machine Learning and Robotics known as Deep Reinforcement Learning (DRL). The focus of my research was on exploring the major applications of DRL, particularly those developed by Deep Mind, and understanding the architecture of a neural network used in this context. Additionally, I delved into model-free algorithms that form the foundation of DRL and their significance in this field.

Introduction to Advanced Persistent Threats

As someone with a passion for network security, I have conducted extensive research on the topic of Advanced Persistent Threats (APTs), which have become a significant concern for many organizations. APTs are a new kind of threat that involves targeted attacks by hackers who gain unauthorized access to a network and remain undetected for a prolonged period.

Adaptive privacy policy Algorithm for Image Classification

With a significant increase in the world of web we see a lot of images being shared socially, I worked with a team during my undergraduate studies and collectively researched about how security can be provided to the data being shared online some of the classical algorithms.

ACADEMIC PROJECTS

Book X Change -

In this project, I built a book rental app primarily designed for the Android operating system. The app allows students to rent out their books to college mates for a while, albeit at a small cost. I used technologies such as SQLite, FCM, XML, and JAVA to develop this app, which provides a simple, intuitive interface that makes it easy for students to rent and lend books.

Food Estimator at Events -

In this project, I created a single-page web application that allowed users to calculate the amount of food required based on the number of guests attending an event. The app provides accurate estimates and helps minimize food waste. Additionally, I implemented a feature that notifies nearby orphanages and social service centers of any excess food that can be collected. I used technologies such as HTML, CSS, Python, and MYSQL to develop this app.

CERTIFICATION

- 1. Microsoft Technology Associate
- 2. Learn from Home (LFH) at Tech Mahindra, India
- 3. Machine Learning beginner to expert powered by Udemy
- 4. Green Field Trainee (GFT) at Accenture, India
